

Reciclo

Project Overview

The project is a mobile application and website specifically designed to facilitate recycling and the effective utilization of all types of waste materials. The platform allows users to request a pickup agent to collect their recyclable waste. In return, users receive either financial compensation or reward points that can be redeemed through approved outlets and program partners. The application stands out from competitors through its simplicity, user-friendly experience, and a range of advanced features. It also integrates Artificial Intelligence capabilities to promote smart consumption, identify waste types, and optimize recycling processes efficiently.

Project Objectives

Our platform aims to foster a greener future by making recycling effortless and beneficial for everyone. Reduce overall waste levels by promoting recycling and sustainable waste management. Generate financial value from recyclable materials. Encourage smart consumption and contribute to environmental protection by reducing pollution. Empower users to dispose of waste responsibly and recycle in a clean, efficient, and convenient way.

Project Scope & Core Components

Reciclo Connect encompasses a full-featured digital ecosystem connecting users with efficient recycling services.

User Management

Robust profiles and secure account handling.

Pickup Request System

Intuitive scheduling and agent dispatch.

Rewards & Points

Tracking and redemption of earned incentives.

AI Waste Identification

Accurate sorting and material classification.

Partner Integration

Seamless connection with redemption outlets.

Admin Dashboard

Comprehensive oversight and control features.

Data & Reporting

Insights into recycling trends and impact.

Reason of Naming

The name “**Reciclo**” is inspired by Latin, the root language of most European languages. Just as Latin evolved and transformed into many modern languages, our platform transforms waste into new value. Reciclo represents renewal, continuity, and the power of giving things a second life.

Stakeholder Interview

1. What is the core vision of the project?

To make recycling easy, accessible, and rewarding for everyone through a digital platform that connects users with recycling services.

2. What is the main objective of the recycling program?

To reduce waste accumulation by encouraging organized waste collection and improving recycling participation rates.

3. What makes this platform different from existing solutions?

The platform includes clear environmental impact tracking and structured collection stages within the application, allowing users to monitor the progress of their waste from pickup to recycling. It also offers a financial rewards system for submitted waste. Additionally, the application is multi-functional, serving not only as a collection platform but also as an awareness, organization, and recycling ecosystem.

4. What is the main problem we are trying to solve?

The project addresses the lack of organization and accessibility in the recycling process, in addition to solving the issue of waste accumulation and street pollution. It aims to reduce environmental damage by creating a structured and convenient waste collection system.

5. Where exactly does the problem lie: sorting, collection, or user motivation?

Primarily in collection and user motivation. People are willing but don't know how or where to recycle easily.

6. Who is the primary target audience?

Restaurants, households (especially mothers who manage household waste), businesses that generate waste regularly, individuals interested in recycling, and people or small businesses that purchase previously used materials for reuse.

7. Is the market ready, or does it require awareness first?

The market requires awareness about recycling practices. This can be achieved through educational notifications and environmental impact feedback that shows users how much they have contributed to helping the environment each time they submit waste.

8. What are the most important features the app must include?

The app will include multiple core features such as:

Environmental impact tracking

A financial rewards system

Scheduled monthly pickup options

A "Scan the Waste" feature that guides users on how to sort waste intelligently

An AI assistant (with a character, name, and personality) to help users organize or creatively reuse waste in environmentally friendly ways

A marketplace (shop) for selling recyclable materials such as cardboard and plastic to individuals who need them, such as art students who reuse materials creatively

9. What is the one core feature without which the project would fail?

Reliable pickup logistics is essential, in addition to a transparent financial rewards system that motivates users to participate consistently.

10. What will make users continue using the app after the first time?

The financial return users receive for their waste, combined with environmental impact tracking that shows the positive difference they are making.

11. How will the project generate revenue?

Revenue will be generated through partnerships with recycling companies, commissions on collected waste, and the recycling process itself, which is inherently profitable when materials are properly processed and resold.

12. How will we measure the success of the project (KPIs)?

Number of active users
Number of pickup requests
Total volume of collected waste (linked directly to recycling output)
Number of partnerships with companies and reward redemption locations

13. What are the main challenges or constraints expected in the early stages?

Convincing people to adopt the idea, organizing and managing field agents efficiently, pricing waste materials correctly, and ensuring smooth logistics coordination

Design Thinking Process

Competitive Analysis

BEKIA

Pros

Home waste collection via booking
Rewards: swap waste for cashback
Focus on collection with rewards
Local presence (Egypt)

Cons

Weak environmental awareness
Usability: medium
No services for companies
No environmental impact tracking
No waste classification scan
No AI Assistant
No marketplace

GREEN RECYCLE

Pros

Home waste collection via scheduled pickup
Good environmental awareness
Offers services for companies
Focus on waste collection/management + awareness
Local presence (specific areas in Egypt)

Cons

No rewards system
Usability: medium
No environmental impact tracking
No waste classification scan
No AI Assistant
No marketplace

RECYCLE COACH

Pros

Strong environmental awareness
Global presence
Focus on education/awareness

Cons

No home waste collection
Usability: medium
No services for companies
No environmental impact tracking
No waste classification scan
No AI Assistant
No marketplace

THE PURITY

Pros

Eco-friendly products (limited)
Environmental impact tracking
Gamification, challenges & seasonal campaigns
Environmental awareness & sustainability education

Cons

Weak environmental awareness
Usability: medium
No services for companies
No environmental impact tracking
Limited product availability

RUBBISH

Pros

Clear recycling & pickup guidelines
Subscription-based waste collection
Service history & pickup tracking

Cons

No monetary rewards
Paid service

SCRAP TRADE

Pros

Daily raw material price table
Scrap market transparency
Material price comparison over time
Data-focused experience

Cons

No environmental awareness
No environmental impact tracking

SWOT Analysis

STRENGTH

- 1- Addresses a real and visible environmental problem (waste accumulation & pollution).
- 2- Clear and strong value proposition: convenience + financial rewards + environmental impact.
- 3- Environmental impact tracking increases emotional engagement and trust.
- 4- Financial rewards system encourages continuous participation.
- 5- Structured and transparent collection process builds credibility.
- 6- Multi-sided platform (users, recycling companies, buyers).
- 7- High scalability potential across different areas and cities.

WEAKNESS

- 1- Heavy dependency on reliable logistics and field operations.
- 2- High initial operational and partnership costs.
- 3- Waste material pricing fluctuations may affect profitability.
- 4- Requires strong trust-building in early stages.
- 5- Broad feature scope may complicate MVP development.

OPPORTUNITIES

- Growing global & local interest in sustainability and recycling initiatives.
- Potential partnerships with governments, NGOs, and environmental programs.
- Increasing consumer preference for eco-friendly solutions.
- Possibility of expanding into B2B waste management services.
- Data monetization opportunities (waste analytics & environmental reports).
- Expansion into additional services (upcycling marketplace, carbon credits, etc.).
- Access to grants, funding, and green investment programs.

THREATS

- Regulatory challenges and waste management compliance requirements.
- Competition from existing recycling companies or emerging startups.
- Operational risks (logistics failures, collection delays).
- Market resistance or low user adoption.
- Economic instability affecting recycling markets and material prices.
- Fraud or misuse of the rewards system.
- Dependence on third-party partners (recycling companies / buyers)

Quantitative Research “Survey”

The survey was developed in Arabic to align with the target audience, and a total of 130 responses were collected through the survey.

- no nearby recycling service
- I don't know how
- I'm not interested
- There is no incentive
- I don't have enough time

Quantitative Research “Interview”

We interviewed 7 people to better understand the needs and preferences of our users so that we can gather enough information for the best results and provide a better experience for them.

1. Tell me about your experience with disposing of household waste in your daily life.
2. Have you ever tried separating or recycling your waste before? If yes, tell me about your experience.
3. What type of waste accumulates the most in your home?
4. What is the biggest factor that motivates—or discourages—you from recycling?
5. Do you find sorting your waste difficult or inconvenient?
6. If there were a recycling app, what features would make you use it regularly?
7. Would you like the app to include a rewards system? If so, what kind of rewards would motivate you the most?
8. Is protecting the environment alone enough motivation for you, or would you need additional incentives?
9. Would you prefer the app to be simple and easy to use, or would you rather have more detailed features?
10. What is the single most important feature you would want in the app?
11. Would you like the app to show you what happens to your recyclables after they are collected?
12. Would you prefer someone to collect your recyclables from your home, or would you rather drop them off yourself? Why?

Persona

Name: Ahmed Hassan
Age: 30
Occupation: Office Employee
Location: Cairo
Marital Status: Single
Young professional

USER QUOTE:
“If it’s easy and there’s something in it for me, I would definitely use it.”

Lifestyle

Ahmed has a busy daily routine between work and home. He prefers solutions that are simple, convenient, and save time. He is interested in environmentally friendly practices but does not want to put in extra effort or complicated steps.

Current Behavior

Ahmed usually throws all household waste together. Occasionally, he may keep certain items like plastic bottles or used cooking oil separately, but this behavior is not consistent.

Most common waste types

Plastic bottles
Paper and cardboard
Food waste
Glass

Pain Points

Lack of a clear and accessible recycling system
Limited recycling facilities nearby
Waste sorting can feel confusing if it requires too many steps
Lack of time and motivation
Low trust in some waste collection services

Motivations

Contributing to environmental protection
Reducing unnecessary waste
Receiving clear benefits or rewards for recycling efforts

App Expectations

Ahmed prefers an app that is: Simple & easy to use
Requires minimal steps
Clearly explains recyclable materials
Important Features
Waste collection scheduling
Rewards wallet or points system
Order tracking
Clear recycling guidelines photos for every category

Incentives

Ahmed is more likely to participate in recycling if there are rewards such as:
Direct monetary rewards
A points system
Coupons or discounts
Redeemable products

Preferred Collection Method

Ahmed prefers
Home pickup service
A fixed and reliable schedule
He does not prefer traveling to drop-off locations.

Retention Factors

Ahmed will continue using the app if:
The process is simple and convenient
Rewards are meaningful
The service is reliable and organized
He may stop using it if:
The app becomes complicated
There are no clear benefits
Collection schedules are inconsistent

Empathy map

"Nothing reminds me to recycle."
"I wish there was a simple system that helps me recycle."
"I need to clearly see what materials can be recycled."
"Some people care about recycling, but most people don't really understand it."
"I don't see a clear or immediate benefit from recycling."

Says

Does

Throws away waste without separating it, or only separates a few simple materials.

Separates waste when in public places that have a clear recycling system.

Recycling would be easy if there was a clear and simple system.
Recycling companies may not always be trustworthy.
Environmental protection often seems like a priority for wealthier people.
recycling apps feel complicated to use.
Recycling can be a strong source of artistic inspiration.

Thinks

Feels

Feels lazy about sorting waste.
Feels confused about how recycling works.
Feels uncertain about what should be recycled.

Metric / Row Header	Task 1: Sign up & OTP	Task 2: AI Scanner	Task 3: Schedule Pickup	Task 4: Redeem Rewards	Task 5: Track Impact
Goal	Verify ease of creating a new account and active OTP validation.	Test efficiency of launching camera to auto-classify items.	Ensure smoothness of inputting location & scheduling pickup.	Measure clarity of point redemption & marketplace items.	Check accessibility and comprehension of profile metrics.
Categories	Authentication	Core / AI Scanner	Core / Logistics	Rewards Market	Profile Dashboard
Estimated Time	00:45	00:20	00:50	00:30	00:15
User Time	01:15	00:42	01:30	00:55	00:25
Success	YES	YES	NO	YES	YES
Observation	Friction during auto-advance on OTP input boxes, but finished.	Missed the green scanner button initially due to low visual weight.	Got completely lost trying to fill address text details and scroll.	Needed guidance on what button transforms points to code.	Liked graph visual style but requested text-label translations.
Problems	OTP input field lacks automatic focus forwarding.	Scanner FAB icon needs prominent sizing or border.	Font sizes are too small; CTA confirm button hidden below fold.	Redeem button lacks proper UX affordance.	Missing explanatory tooltips for structural metrics.
Criticality	Minor	Minor	Critical	Minor	Minor

Success	YES	YES	YES	YES	YES
Observation	Spent time reading terms, but activation was smoothly completed.	Paused for two seconds to locate scanner button, then took photo.	Hesitated while browsing available time-slots for pickup.	Browsed several reward tiers before selecting a coupon.	Easily read the layout of cumulative impact charts.
Problems	None.	Icon placement took slightly longer to register.	Time slots layout required more visual alignment.	None.	None.
Criticality	None	Minor	Minor	None	None
