

BUSINESS EMPHASIS “RECICLO”

STAKEHOLDER INTERVIEW

VISION & STRATEGY

1. What is the core vision of the project?

To make recycling easy, accessible, and rewarding for everyone through a digital platform that connects users with recycling services.

2. What is the main objective of the recycling program?

To reduce waste accumulation by encouraging organized waste collection and improving recycling participation rates.

3. What makes this platform different from existing solutions?

The platform includes clear environmental impact tracking and structured collection stages within the application, allowing users to monitor the progress of their waste from pickup to recycling. It also offers a financial rewards system for submitted waste. Additionally, the application is multi-functional, serving not only as a collection platform but also as an awareness, organization, and recycling ecosystem.

PROBLEM & MARKET

4. What is the main problem we are trying to solve?

The project addresses the lack of organization and accessibility in the recycling process, in addition to solving the issue of waste accumulation and street pollution. It aims to reduce environmental damage by creating a structured and convenient waste collection system.

5. Where exactly does the problem lie: sorting, collection, or user motivation?

Primarily in collection and user motivation. People are willing but don't know how or where to recycle easily.

6. Who is the primary target audience?

Restaurants, households (especially mothers who manage household waste), businesses that generate waste regularly, individuals interested in recycling, and people or small businesses that purchase previously used materials for reuse.

7. Is the market ready, or does it require awareness first?

The market requires awareness about recycling practices. This can be achieved through educational notifications and environmental impact feedback that shows users how much they have contributed to helping the environment each time they submit waste.

PRODUCT & EXPERIENCE

8. What are the most important features the app must

include? The app will include multiple core features such as:

- Environmental impact tracking
- A financial rewards system
- Scheduled monthly pickup options
- A “Scan the Waste” feature that guides users on how to sort waste intelligently
- An AI assistant (with a character, name, and personality) to help users organize or creatively reuse waste in environmentally friendly ways
- A marketplace (shop) for selling recyclable materials such as cardboard and plastic to individuals who need them, such as art students who reuse materials creatively

9. What is the one core feature without which the project would fail?

Reliable pickup logistics is essential, in addition to a transparent financial rewards system that motivates users to participate consistently.

10. What will make users continue using the app after the first time?

The financial return users receive for their waste, combined with environmental impact tracking that shows the positive difference they are making.

BUSINESS & SUCCESS

11. How will the project generate revenue?

Revenue will be generated through partnerships with recycling companies, commissions on collected waste, and the recycling process itself, which is inherently profitable when materials are properly processed and resold.

12. How will we measure the success of the project (KPIs)?

- Number of active users
- Number of pickup requests
- Total volume of collected waste (linked directly to recycling output)
- Number of partnerships with companies and reward redemption locations

RISKS

13. What are the main challenges or constraints expected in the early stages?

Convincing people to adopt the idea, organizing and managing field agents efficiently, pricing waste materials correctly, and ensuring smooth logistics coordination.
